

DEB Notice 022811 – New Resources Available on the BCOM Website

Two new sections have been added to the BCOM website (<http://bcom.dgs.virginia.gov>):

1. Building Information Tracking System (BITS)
2. Virginia Building Construction Cost Database (Cost Data)

You may access these resources from the BCOM website menu:

Building Information Tracking System (BITS)

The BITS page on the BCOM website serves as the primary portal for state agencies to access the Building Information Tracking System. Agencies will use BITS for submitting capital outlay authorization (CO) forms and for applying for building permits and certificates of use & occupancy. The system is currently in the final development/testing stage. Access forms, training information, and other related materials will be posted as they become available. Check back periodically to the “BITS” page to obtain new training materials and other information.

Virginia Building Construction Cost Database

This resource provides summary project cost information for reference by Commonwealth of Virginia agencies when planning capital projects. Periodic updates of this cost data will be posted on the BCOM website. Check back periodically to the “Cost Data” page to view the latest updates.
